

Non pharmacological treatments for chronic pain:
Self-management and Mindfulness Meditation

Ruth Dubin MD (Queens)
David Clark OT (Toronto Rehab)
Evelyn Bowering MSW (Queens)

► Ruth Dubin: disclosures and conflicts of interest: none
► David Clark: disclosures and conflicts of interest:

At the end of this session participants will:

- Understand how self-management and mindfulness programs improve patients' self-efficacy, reduce depression, and increase coping skills
- Be aware of readily available programs in Ontario
- Gain skills in promoting these programs to patients

What is Self-Management?

“ The individual's ability to manage the symptoms, treatment, physical and social consequences and lifestyle changes inherent in living with a chronic condition”.

✱ (Barlow et al, 2002)

What is Self-Management Education?

- Programs, based on adult learning principles, that provide patients/clients with the five core skills needed to live an active and meaningful life.
- The goal is to maintain a wellness focus in the foreground, even in the midst of a chronic condition, to improve quality of life (Lorig, 2003).

Five Core Self-Management Skills

```

```

Chronic Pain Self Management Program

- Standardized program
- Community-delivered
- 10-15 people per group
- 2.5 hrs /wk for 6 weeks
- Adaptation ASMP/CDSMP
- Train-the-trainer model of dissemination
- Leaders – Peers or HCPs
- Pain workbook and exercise audio CD

PAIN SELF-MANAGEMENT TOOLBOX

Physical Activity/Exercise	Problem-Solving
Managing Fatigue	Using your Mind
Pacing & Planning	Healthy Eating
Relaxation & Better Breathing	Communication
Medications	Understanding Emotions
Working with Health Professionals	Finding Resources

In 2004, one man's tears in my office led me to Dr. Sandi Lefort: chronic pain self-management program developer

Education and Exercise Program for Chronic Pain Patients

This unit is based on the authors' research presented at the June 2007 International Conference on Pain and Chronic Disabilities in New York City.

Yelp, a Canadian community-based program for chronic pain patients, provides hope, improves physical function, pain tolerance, and coping skills.

By: C. King (author), M. G. (co-author), L. G. (co-author), M. G. (co-author), M. G. (co-author), M. G. (co-author), M. G. (co-author), M. G. (co-author), M. G. (co-author), M. G. (co-author)

Get with the Program: People who attend the program attain:

- Improved self efficacy
- Improved bodily function
- Reduced pain
- Improved Mental health Composite score (SF-36): (vitality, Social and emotional functioning and mental health)
- Reduced catastrophizing
- Reduced depression and catastrophizing scores in our studies linked to improved overall function

MOHLTC supports the Stanford Based Self Management Programs*

- <http://www.livingwellseontario.ca/>
- Multiple chronic disease self management programs (License fee paid by MOHLTC)
- see <http://patienteducation.stanford.edu/programs/cpsmp.html>
- : Diabetes, COPD, HIV, Chronic Pain

* Pay license fees, pay for training leaders, choices and changes workshop to teach PCP's how to improve uptake.

ECHO
Chronic Pain

J. of Neuroscience 201131(14):5540

Meditation-induced reductions in pain intensity ratings were associated with increased activity in the anterior cingulate cortex and anterior insula, areas involved in the cognitive regulation of nociceptive processing. Reductions in pain unpleasantness ratings were associated with orbitofrontal cortex activation, an area implicated in reframing the contextual evaluation of sensory events. Moreover, reductions in pain unpleasantness also were associated with thalamic deactivation, which may reflect a limbic gating mechanism involved in modifying interactions between afferent input and executive-order brain areas.

- Mindfulness meditation promotes metacognitive awareness,
- Decreases rumination via disengagement from perseverative cognitive activities,
- Enhances attentional capacities through gains in working memory;
- These cognitive gains, contribute to effective emotion regulation strategies.

ECHO **MINDFULNESS AND CHRONIC PAIN**

PAIN 152 (2011) 361-369

- ▶ RCT MBSR in FMA : 8 weeks MBSR versus 8 weeks (education, progressive muscle relaxation, wait list control):
- ▶ (n=177) In the post-intervention interviews, patients in the MBSR arm reported substantial improvements, and large effect sizes were found, on a self-rated global scale that estimated perceived lessening of fibromyalgia-related impairment. Patients also indicated that they had achieved personal goals exceeding the level expected at baseline.

Welcome

Mindfulness-Based Chronic Pain Management (MBCPM) is a program developed and facilitated by Dr. David Carson, M.D. (right). While there are [five different levels of the program](#), there are all conducted in the studio (right) and meet weekly at various hospitals in Ontario, in a quiet, honest, welcoming and relaxed atmosphere.

This is the official site for Dr. David Carson, M.D. and the Mindfulness-Based Chronic Pain Management courses.

If you are a patient and are interested in taking a course, please read [MBCPM Level 1 and About the Course](#). For those who want to take a course in Ontario must be referred by a physician. For more information on the referral process or to refer a patient, please click here.

Course List

- MBCPM Level 1
- MBCPM Level 2
- MBCPM Level 3
- MBCPM Level 4
- MBCPM Level 5

ECHO **BUT: You've suggested to your patient that the Self-Management or the Mindfulness might help and he/she says:**

- ▶ I don't like groups
- ▶ It won't work for me
- ▶ I don't have time
- ▶ I've tried everything, nothing works
- ▶ Doc, just give me my pills, that's all I want
- ▶ And more of the same....

ECHO **WHY WE NEED A TEAM!**

David: HELP!!!!!!!

WHAT CAN YOU OFFER HIM/HER?

ECHO **OT Role: Breaking down barriers**

- ▶ Talk about their previous experiences with self management.
 - ▶ What education have they received/pursued?
 - ▶ What strategies have they tried, and for how long?
 - ▶ How did it go? What was the reaction? Was there something that really spoke to them?
 - ▶ What informal strategies / approaches do they apply?

ECHO **Breaking down more barriers**

- ▶ Relate potential strategies to concrete examples, relevant to patient
 - ▶ Athletes or performers in "the zone"
 - ▶ "Flow" moments
 - ▶ "What parts of your life really rise above your pain?"

 **Getting our feet wet**

- ▶ Start with concrete, prescribed, structured exercises and activities
 - ▶ PMR or breathing exercises
 - ▶ Walking meditation
 - ▶ Mindful Movement (Yoga, Tai Chi, Qi Gong)

 **Resources: When a structured program isn't an option...digital**
