

# Pillars of Pelvic Pain Management

Dr. Catherine Allaire - MDCM, FRCSC  
 Dr. Virginia McEwen - CCFP-FP  
 Rebecca Weaver - PT

**VANCOUVER**  
CONVENTION CENTRE

THE COLLEGE OF FAMILY PHYSICIANS OF CANADA  
 LE COLLEGE DES MÉDECINS DE FAMILLE DU CANADA

1

# Pillars of Chronic Pelvic Pain Management

November 6, 2024

2

## Land Acknowledgment

This land is the traditional land of the Coast Salish peoples. As a white settler, I am grateful for the land on which I live, work, and play. I am an uninvited guest on these lands that has much to give back to this community and its people, and humbly thank the Coast Salish peoples, this land and its creatures, and the Creator for their gifts. As guests on this land, I encourage us all to take a moment to reflect on how we may all can contribute to treating the land and all of its people with kindness and respect.

3

## Disclosure of Financial Support

This program has received no external financial support.

4

## Objectives

After today's session, participants will be able to:

- Identify relevant clinical diagnoses
- use a stepwise approach to addressing different facets of pelvic pain
- implement approaches to reduce inflammatory, central sensitization, and neuropathic pain burden comorbid in pelvic pain
- Integrate multidisciplinary recommendations for pelvic floor physiotherapy and when to involve psychology

5

## Part 1

**Dr. Allaire MD MDCM FRCSC**

Clinical Professor, UBC Department of Obstetrics and Gynaecology  
 Head, Division of Gynaecologic Specialties  
 Medical Director, BC Women's Centre for Pelvic Pain and Endometriosis  
 Director, UBC Advanced Training Program in Pelvic Pain, Endometriosis and Advanced Laparoscopy

6

## Presenter Disclosure

**Presenter:** Dr. Catherine Allaire

---

**Relationships with financial sponsors:**  
 Dr. Catherine Allaire has received financial compensation unrelated to this program for participating in:

- Advisory Board: Abbvie, Pfizer

7

## Part 1 – Dr. Allaire

- Review definition and epidemiology/impact
- Clinical diagnosis
- Practical approach history and physical to identify pain contributors
- Hormonal management recommendations  
When is surgery now considered?

8

## Chronic (Persistent) Pelvic Pain

Pain lasting more than 3-6 months perceived to originate from pelvic organs/structures

Associated with negative cognitive, behavioral, emotional and sexual consequences

Associated with symptoms suggestive of lower urinary, sexual, bowel, pelvic floor, myofascial or gynecologic dysfunction

9

## CPP: Societal Impact

Affects 15% of female adults	Accounts for ~ 10% of referrals to gynaecologists	Primary indication for 40% of diagnostic laparoscopies
Primary indication for 12% of hysterectomies	Direct U.S. health care costs: \$800 million/yr Combined U.S costs: \$2 billion/year	Patient experience: Suffering Decreased productivity Marital discord and divorce Complications from treatments

10

## Pain Contributors

- Gynecologic:** *ovarian dysfunction, endometriosis*, adenomyosis, vulvo/vestibulodynia, pelvic venous disorders, chronic pelvic inflammatory disease, pelvic adhesions, adnexal masses, uterine fibroids, ovarian remnant.
- Gastrointestinal:** *irritable bowel syndrome*, chronic constipation, chronic appendicitis, inflammatory bowel disease
- Urological:** *pelvic bladder syndrome/interstitial cystitis*, recurrent urinary tract infection, chronic renal/bladder stones
- Musculoskeletal and myofascial:** *pelvic floor; abdominal wall; pelvic girdle*, hip, and lumbosacral disorders, hernias, hypermobility syndromes
- Neuropathic:** *ilio-inguinal/ilio-hypogastric neuropathy*, radiculopathy; entrapment/neuromas
- Psychosocial Factors:** *acute trauma symptoms; anxiety*, depression, insomnia, pain catastrophizing

11

## Central sensitization

Created with BioRender

12

### Chronic Overlapping Pain Conditions (COPCS)

- NIH recognized condition 2015
- Pain conditions that occur in combination, mostly in women
- Altered neural, immune and endocrine mechanisms
- One disorder with multiple phenotypes

[www.chronicpainresearch.org](http://www.chronicpainresearch.org)

13

### RISK FACTORS FOR CS

#### Predisposing Factors

- Genetics
- Exaggerated stress-response
- History of depression, anxiety
- History of physical or psychological trauma at early age

#### Reinforcing Factors

- Sleep disturbance
- Anxiety, depression, fear-avoidance
- Operant learning: interpersonal and environmental reinforcements
- Repeated nociceptive exposure (wind-up)

[Instituteforchronicpain.org](http://Instituteforchronicpain.org)

14

### Essential components of CPP Assessment

- Build therapeutic relationship
- Assess psychosocial factors
- Thorough history and physical exam for peripheral nociceptors
- Identify CS

15

**Table 2. Assessment of patients with chronic pelvic pain: clinical history**

Assessment Techniques	Description
Building a therapeutic relationship	<ul style="list-style-type: none"> <li>• Avoid pain stigma (e.g., pain is "all in the head" or caused by past sexual abuse)</li> <li>• Validate the pain (e.g., rather than saying "there's nothing there," provide a fuller explanation of the pain)</li> <li>• Active listening (i.e., let the patient tell her story then summarize back)</li> <li>• Empathy (e.g., "That must be very difficult," "I am sorry you have experienced that")</li> </ul>
Pain History (OPQRST)	<ul style="list-style-type: none"> <li>• Onset: Initiating event (e.g., surgery, cyst rupture, miscarriage), duration and frequency</li> <li>• Provoking/palliating: Movement, intercourse, menstrual cycle, and medications</li> <li>• Quality: Sharp, cramping, and/or burning</li> <li>• Region/Radiation: Diffuse, localized, unilateral, and/or radiates to back, hip, groin, or vulva</li> <li>• Severity: Elicit numeric rating (0–10) for pain at specific times.</li> <li>• Treatment: What medications/surgeries/treatments have been tried and/or are currently using? What is the effectiveness and are there side effects?</li> <li>• History of pelvic surgeries: Targeted to pain (laparoscopy, -ectomies), duration of any relief, other pelvic surgeries and any temporal relation to pain onset</li> </ul>
Psychosocial factors questions (FIFE)	<ul style="list-style-type: none"> <li>• Function: Ask about pain impact (e.g., "How has this pain impacted your life?")</li> <li>• Ideas: Elicit beliefs about the pain (e.g., "What do you believe is causing this pain?")</li> <li>• Fears: Explore pain catastrophizing (e.g., "Do you have any anxious or worrisome thoughts about this pain?")</li> <li>• Expectations: Explore the hopes for this visit and treatment expectations (e.g., "What kind of results are you hoping to get from this treatment?")</li> </ul>

*Allaire et al. Guideline No. 445: Management of Chronic Pelvic Pain, JOGC 2024*

16

### Physical Examination

**Labels in diagram:** Sacral bone, Ovary, Peritoneum, Fallopian tube, Retaining Edge of Vaginal Pelvic Floor Muscle Platform, Cervix, Uterus, Urinary Bladder, Secondary Ligament of Ovary, Chlores, Pubococcygeus Muscles, Urogenital Muscular Diaphragm, Urethra, Vagina, Perineum, Anal Sphincter Doughnut, Vagina with Vaginal Pelvic Floor Muscle Platform, Levator ani Muscles, G Spot, Coccyx, Rectum, First & Second Folds of Rectum, Pubococcygeus Muscles, Balbococcygeus Muscle, Vagina.

17

**Table 3. Assessment of patients with chronic pelvic pain: physical examination**

Assessment Techniques	Description
Overall	<ul style="list-style-type: none"> <li>• Affect, gait, mobility, and pain behaviour</li> </ul>
<i>If tender area found, ask if it reproduces usual pain</i>	
Back/pelvis	<ul style="list-style-type: none"> <li>• Screen for pelvic girdle pain*, pelvic asymmetry, hip exam (e.g., FABER, FAIR)</li> </ul>
Abdomen	<ul style="list-style-type: none"> <li>• Scars (tender?), allodynia test with cotton swab*</li> <li>• Localized tender areas (Carnett's test to identify abdominal wall pain*)</li> <li>• Look for masses or hernias</li> </ul>
Pelvic exam	<ul style="list-style-type: none"> <li>• Offer chaperone</li> <li>• Obtain permission (e.g., "Are you okay to have an internal exam now or at a future appointment?")</li> <li>• Frequent check-ins during exam (e.g., "Are you okay? Can we continue with the exam?")</li> <li>• Vulvar skin examination for lesions or skin conditions</li> <li>• Cotton swab test for provoked vestibulodynia and dermatomal pain S2–S4 (vulvodynia)</li> <li>• Single digit vaginal exam of the pelvic floor muscles (Figure 1); anterior vagina for bladder tenderness, cervix, adnexae, cul-de-sac tenderness and/or nodularity</li> <li>• Bimanual exam of uterine size, position, tenderness, mobility, adnexal masses/tenderness</li> <li>• Rectovaginal exam if deep endometriosis of bowel is suspected or to determine extent of any cul-de-sac nodule palpated</li> <li>• Speculum exam (if bimanual exam tolerated) for the examination of the vagina, cervix, cuff, look for discharge, prolapse</li> </ul>
Basic investigations	<ul style="list-style-type: none"> <li>• Pelvic ultrasound (as an initial evaluation for pelvic pathology)</li> <li>• Urinalysis (if bladder symptoms)</li> <li>• Vaginal wet prep and cervical swabs (if infection suspected)</li> </ul>

FABER: flexion, abduction, and external rotation; FAIR: flexion, adduction, internal rotation.  
\*see Supplementary videos in references 59 and 60.

18

### Examination of the Abdominal Wall

Light touch/Q.tip: allodynia  
Localized tenderness/muscle twitch: Carnett's test

4  
XX  
RELAXED

7  
XXX  
CONTRACTED

19

### Therapeutic Plan for CPP

- GIVE PATIENT DIAGNOSIS/DIAGNOSES
- PROVIDE PAIN EDUCATION
- PATIENT-CENTERED GOALS: PARTNERING WITH PATIENT
- ADDRESS PERIPHERAL NOCICEPTORS
- MULTIDISCIPLINARY OR INTERDISCIPLINARY CARE FOR CS

20

### Pain Education

- Starts in the office with proper language  
Explain Pain book/workshop  
Script/metaphor
- Use short videos
- Books and websites (see Reference list)
- Improves readiness for change

21

22

### ENDOMETRIOSIS FACT AND FIGURES

- 1 in 10 females** suffer from endometriosis
- Ectopic endometrial tissue (glands and stroma)
- Estrogen-dependent chronic inflammatory process
- 8-10 years** delay between onset and diagnosis
- Up to **1 in 3** people with endometriosis have fertility problems

In Canada, the cost of endometriosis is **\$1.8 billion** annually

23

### Endometriosis lesions

- Peritoneum
- Ovaries
- US ligaments

Common Pelvic Sites

- Vagina
- Bowel
- Bladder
- Ureters

Other Pelvic Sites

- Incisions
- Umbilicus
- Diaphragm
- Lung

Rare Sites

24

Endometriosis subtype	Transvaginal ultrasonography	Laparoscopy
Superficial peritoneal endometriosis	Not visible on imaging	
Ovarian endometrioma		
Deep endometriosis of sigmoid colon		

*Allaire et al. Diagnosis and Management of Endometriosis. CMAJ, 2023*

25

### When to Suspect Endometriosis

**Classic symptoms**

- Severe dysmenorrhea
- Deep dyspareunia
- Chronic pelvic pain
- Infertility
- Dysuria (cyclic) ± hematuria\*
- Dyschezia (cyclic) ± hematochezia\*
- Cyclic SOB or chest pain, shoulder pain, hemoptysis, pneumothorax

**Other nonspecific symptoms**

- Abnormal uterine bleeding
- Low back pain
- Abdominal pain or bloating
- Fatigue

**Signs**

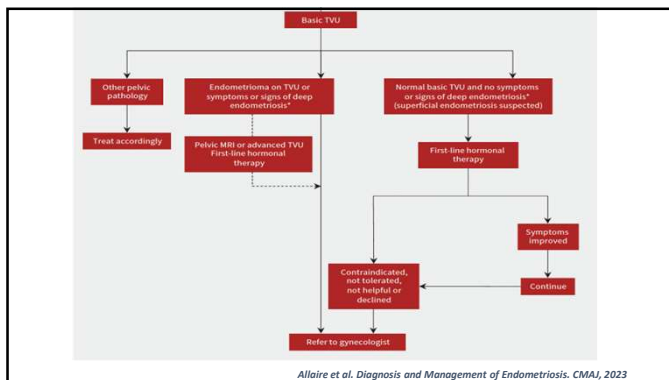

- Fixed retroverted uterus\*
- Nodularity in posterior vaginal fornix\*
- Tender posterior and lateral vaginal fornices
- Adnexal mass

**Risk factors**

- First-degree relative with endometriosis
- Early menarche, heavy flows, short cycles
- Müllerian anomaly
- Nulliparity
- Low birth weight
- Low BMI

\* Suspect deep endometriosis *Allaire et al. Diagnosis and Management of Endometriosis. CMAJ, 2023*

26

27

### FIRST-LINE THERAPIES

- Pre-emptive NSAIDs
- Cyclic CHCs

### OVARIAN/MENSTRUAL SUPPRESSION

- Continuous CHCs: monophasic pill
- Progestins

**LNG-IUS**

- norethindrone (0.35mg, 1-3 tabs/day)
- drospironone (4mg)
- dienogest (2mg)
- norethindrone acetate (5mg, 0.5-3 tabs/day)
- medroxyprogesterone acetate (oral 10-20mg, Depot 150 mg IM q6-8 weeks)

28

### Ovarian suppression

*Cochrane database review: Oral contraceptives, MPA, Gestrinone, Danazol, GnRH agonists*

- All equally effective (60-70%) and better than placebo
- Side-effect profile varies

*Brown J, Farquhar C. Cochrane Reviews 2014*

29

### TIPS TO MANAGE BREAKTHROUGH BLEEDING

Discuss the risk of BTB prior to initiation

To reduce the risk of breakthrough bleeding:

- Consistent pill use, timing, and smoking cessation
- 3-day hormone-free interval rather than 7-day after a minimum of 21 days of CHC use

To manage BTB

- Switch to another CHC with a different type of progestin
- Short course of oral estrogen (e.g., 1.25 mg conjugated estrogen or 2 mg 17β-estradiol) daily for 7 days for BTB on progestins

*Black et al. JGIM 2004; 143 (Part 2): 219-54. Guilbert et al. SOGC 2007; 195: 51-62.*

30

### Conservative Endometriosis Surgery Outcomes

Cumulative pain recurrence	➔	<b>20-40 %</b>
Reoperation rate at 5 years	➔	<b>36 %</b>
Negative repeat surgeries	➔	<b>38 %</b>

31

### BC Women's Centre for Pelvic Pain and Endometriosis

**BC WOMEN'S HOSPITAL+ HEALTH CENTRE** **W** **UBC**

Allaire et al. Interdisciplinary Teams in Endometriosis Care. Sem Reprod Med 2020

32

**Part 2**

**Dr. McEwen MD CCFP-FP**

Pain Medicine  
Chronic Pain Management Program, St. Joseph's Care Group  
Interventional Pain Service, Thunder Bay Regional Health Sciences Centre  
Assistant Professor, NOSM University

33

### Presenter Disclosure

**Presenter:** Dr. Virginia McEwen

---

**Relationships with financial sponsors:**

- Any direct financial relationships, including receipt of honoraria: **not applicable**
- Membership on advisory boards or speakers' bureaus: **not applicable**
- Patents for drugs or devices: **not applicable**
- Other: **not applicable**

34

**Conflicts of interest:**  
None to declare.

**Caveat:**  
Medications used in chronic pain are largely off-label.

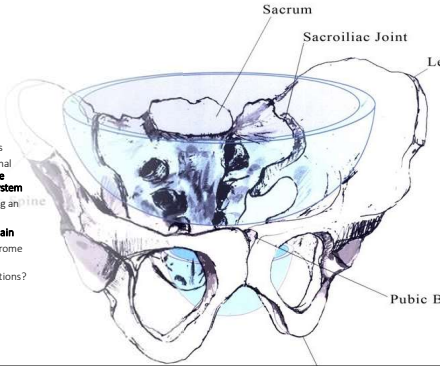

35

### Overarching Caveats

- Validation
- Pain education
  - Power Over Pain Portal <https://poweroverpainportal.ca>
- Multidisciplinary approaches:
  - Pelvic floor physiotherapy
  - Psychology
  - Lifestyle
- Autonomy/shared decision-making

36

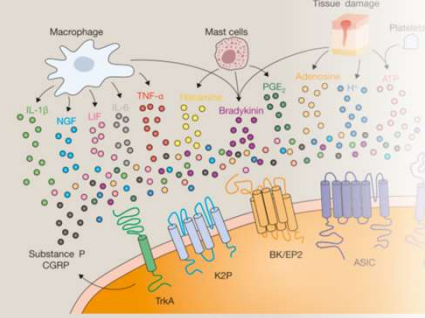

### Common Discussions

- **Importance of hormonal control**
  - Progesterone-based treatments
- Endometriosis is not simply a hormonal problem, but also one that **affects the nervous system, MSK, and immune system**
- Concept of pelvis as a bowl containing an **Inflammatory soup**
- **Central sensitization and nociceptive pain**
  - Comorbid Painful Bladder Syndrome or Irritable Bowel Syndrome?
  - Chronic overlapping pain conditions?

37

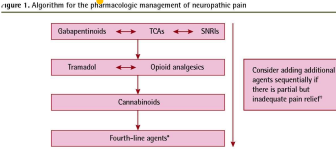

### Pharmacological options - Inflammation

- Anti-inflammatories
  - Non-selective ex. Naproxen, ibuprofen
  - Cox-2 selective ex. Celecoxib, meloxicam, diclofenac/misoprostol
  - ASA
- Low-dose naltrexone
- TLR4 receptor antagonist
- Fluoxetine (SSRI)
- Sigma 1 receptor antagonist
- Cannabis
  - CBD dominant – can be helpful in some patients
- Blocking other drivers of inflammation?
  - Estrogen related inflammation? Progesterone
  - Mast cell related inflammation? Ketotifen/Cromolyn

38

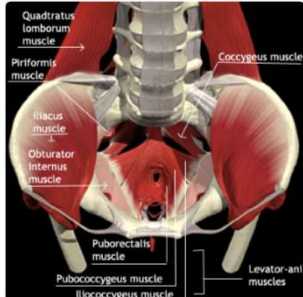

### Pharmacological Options – Neuropathic Pain

- Tricyclic antidepressants
  - Amitriptyline most commonly prescribed
  - Consider nortriptyline instead, if sleep an issue, or desipramine, if fatigue is an issue
- Selective norepinephrine reuptake inhibitors
  - Duloxetine (especially if concurrent low back pain)
  - Venlafaxine (especially if concurrent migraines)
- Gabapentinoids
  - Pregabalin (especially if concurrent anxiety) or gabapentin
- Low-dose naltrexone
  - Glial cell modulator
- Cannabis
  - THC dominant - can be helpful in some patients

39

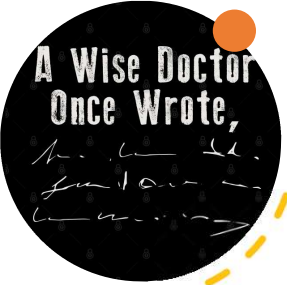

### Pharmacological options – MSK pain

- Magnesium
- NSAIDs
- Baclofen
- Cyclobenzaprine
- Methocarbamol
- Tricyclic antidepressants
- Gabapentinoids

40

### Pharmacological Options – Opioids

- Not first-line treatment
- However, still a possible part of the treatment plan, particularly with a focus on functional goals
- Try to stay within recommended watchful doses (80 – 150MME)
- Consider opioid rotations before escalation to doses >150MME
- Patient teaching around opioid-induced hyperalgesia
- New 2024 National Pain Centre Opioid Guidelines: [2024-Opioid-Prescribing-Guideline-Web.pdf](https://www.mcmaster.ca/2024-Opioid-Prescribing-Guideline-Web.pdf)

41

### 2024 CANADIAN OPIOID PRESCRIBING GUIDELINE

**GOOD PRACTICE STATEMENT:** Patients with chronic non-cancer pain prescribed opioids should not be engaged in forced/involuntary tapering.

<p><b>RECOMMENDATION 1</b></p> <p>In people living with chronic non-cancer pain with a history of mental illness or an active mental health disorder, who have persistent problematic pain despite optimization of available nonopioid therapies, the panel recommends offering a trial of opioids.</p> <p><b>Notes:</b> There is a small but significant benefit that may be helpful for people living with chronic pain.</p> <p><b>Recommendation strength:</b> (STRONG recommendation)</p>	<p><b>RECOMMENDATION 2</b></p> <p>In people living with chronic non-cancer pain with a history of mental illness or an active mental health disorder, who have persistent problematic pain despite optimization of available nonopioid therapies, the panel recommends offering a trial of opioids.</p> <p><b>Notes:</b> The recommendation is conditional as people who are receiving a trial of opioids, but a trial of opioids, may have reduced, limited, or no improvement in response with discontinuation of opioids if response is not sustained or if response is not sustained after 2 weeks.</p> <p><b>Recommendation strength:</b> (CONDITIONAL recommendation)</p>	<p><b>RECOMMENDATION 3</b></p> <p>In people living with chronic non-cancer pain, currently prescribed opioids and experiencing persistent problematic pain and/or problematic side effects, the panel suggests rotation to other opioids.</p> <p><b>Notes:</b> (STRONG recommendation)</p>	<p><b>RECOMMENDATION 4</b></p> <p>In people living with chronic non-cancer pain, who have persistent problematic pain despite optimization of available nonopioid therapies and have an acute, recurrent, or new flare of pain, the panel recommends offering a trial of opioids.</p> <p><b>Notes:</b> (STRONG recommendation)</p>	<p><b>RECOMMENDATION 5</b></p> <p>In people living with chronic non-cancer pain, who are engaged in voluntary opioid tapering and experiencing challenges, we suggest engagement in multidisciplinary support.</p> <p><b>Notes:</b> (CONDITIONAL recommendation)</p>
<p><b>RECOMMENDATION 6</b></p> <p>In people living with chronic non-cancer pain with a history of mental illness or an active mental health disorder, who have persistent problematic pain despite optimization of available nonopioid therapies, the panel recommends offering a trial of opioids.</p> <p><b>Notes:</b> (STRONG recommendation)</p>	<p><b>RECOMMENDATION 7 &amp; 8</b></p> <p>In people living with chronic non-cancer pain undergoing a trial of opioids, the panel suggests limiting daily opioid use to 100 morphine equivalents daily.</p> <p><b>Notes:</b> (STRONG recommendation)</p>	<p><b>RECOMMENDATION 9</b></p> <p>In people living with chronic non-cancer pain, currently prescribed opioids and experiencing persistent problematic pain and/or problematic side effects, the panel suggests rotation to other opioids.</p> <p><b>Notes:</b> (STRONG recommendation)</p>	<p><b>RECOMMENDATION 10</b></p> <p>In people living with chronic non-cancer pain on long-term stable opioid therapy for chronic non-cancer pain, the panel recommends that clinicians initiate a discussion offering a trial of opioid tapering to the lowest effective dose, potentially including discontinuation, if the offer is declined, repeating the offer every 12 months.</p> <p><b>Notes:</b> (STRONG recommendation)</p>	<p><b>RECOMMENDATION 11</b></p> <p>In people living with chronic non-cancer pain who are engaged in voluntary opioid tapering and experiencing challenges, we suggest engagement in multidisciplinary support.</p> <p><b>Notes:</b> (CONDITIONAL recommendation)</p>

42

Trigger Point & Referred Pain Guide

Select Symptom Area

Upper Back, Shoulder, and Arm  
Torso  
Lower Back  
Leg, Ankle & Foot  
Hip, Thigh & Knee  
Head and Neck  
Painless & Hand/Pain

Article on trigger point injections:  
<https://www.ncbi.nlm.nih.gov/books/NBK542196/>

### Interventional Options

- Trigger point injections
- Tertiary referral:
  - Abdominal wall fascial plane nerve blocks
  - Joint injections if sacroiliac joint involved
  - Intravaginal blocks (onabotulinum toxin A)
  - Lidocaine/ketamine infusions
  - Plexus blocks (superior hypogastric)

**Abdominal Obliques**

43

### Part 3

**Rebecca Weaver, MScPT,  
Registered Physiotherapist**  
Special interest in pelvic health

Physiotherapist at the BC Centre for Pelvic Pain and Endometriosis at BCWH

BC WOMEN'S HOSPITAL HEALTH CENTRE  
An entity of the Provincial Health Services Authority

44

### Presenter Disclosure

**Presenter: Rebecca Weaver, PT**

**Relationships with financial sponsors:**

- Any direct financial relationships, including receipt of honoraria: **not applicable**
- Membership on advisory boards or speakers' bureaus: **not applicable**
- Patents for drugs or devices: **no applicable**
- Other: **not applicable**

45

### Part 3 – Approach to Pain

46

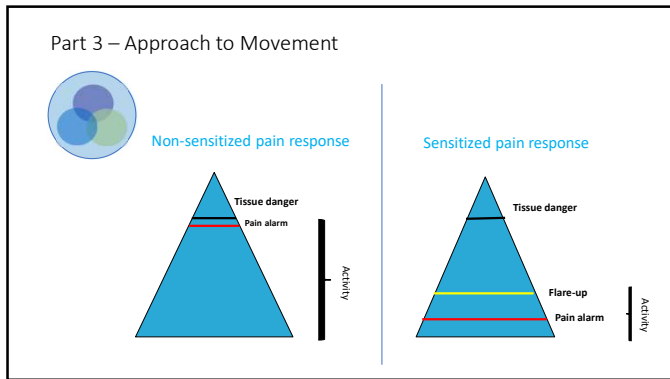

### Part 3 – Physiotherapy Factors

47

Insert WERF video here

48

49

### Part 3 – Physiotherapy Treatment

34-year-old patient with endometriosis, pelvic floor myalgia, dyspareunia, IBS, and central sensitization/nociplastic pain.

**Foundation:**

- Validation, reassurance, cognitive beliefs
- Pain neuroscience education – threats versus safeties
- Relaxation strategies for the pelvic floor (not Kegels!)
- Connecting to breath and the abdominal wall

**Progressing:**

- Graded exposure for dyspareunia – dilators
- Extra-pelvic factors driving pelvic floor tension – PGP? Thorax?
- Healthy bowel/bladder habits
- Reintegrating into activities, lived experience of moving without flaring

**Independence:**

- Expanding comfort zone
- Toolbox of self-management strategies
- Manage a flare independently
- Knows when to return to physio

50
